

# Quality First

Quality MessageMats™ capture 80% of the dust, dirt, and moisture that is tracked into buildings on employees' and customers' shoes. These colorful, attractive mats are made of soil grabbing, high twist solution dyed nylon yarn with a non-skid nitrile rubber backing. In addition to collecting soil, they provide employees with the valuable reminder of the importance of quality. This increased awareness can lead to fewer defects, higher productivity, and improved customer satisfaction.

Available in a variety of designs and colors, Quality MessageMats are regularly exchanged by rental service companies to ensure they remain clean and fresh. These mats are one of the best investments businesses can make. By reducing floor maintenance costs while improving quality awareness, Quality MessageMats will pay for themselves!
